

## Introducing the Pneumatico Pallet Repair Table

### What is a Pallet Repair Table?

The Pneumatico **WT-2** Pallet Repair Table, is an ergonomic workstation dedicated to the repair of EPAL/EURO pallets.

### What are the key features?

- The **pneumatic lift** allows effortless 360 degree rotation of the pallet.
- The **trough** takes away the physical demands involved when flipping pallets.
- The **transport roller** is a design feature to aid with loading the pallet onto the workstation.
- Balancers** are mounted to the Angled Rails to support the weight of the nail guns significantly reducing operator fatigue.
- LED** lights for a well illuminated work area.
- Robust **solid steel** work top construction prevents damage from occurring to the work surface.

### Pneumatico WT-2 Pallet Repair Table Features

### Why use a Pallet Repair Table?

#### 1. Having the right tools for the job

Given the significance of pallet repairs to many businesses, having a dedicated workstation specifically designed for this process, with all the required tools mounted, ensures a productive, professional and safe working environment.

#### 2. Efficiency

The features of the workstation were designed to ensure the quick and efficient repair of pallets by making the flipping and rotating of the pallet as easy and effortless as possible.

The physical nature of repair work inevitably results in a fall in production due to fatigue setting in, while at the same time increasing the risk of exposure to injury.

Given that the EPAL/EURO pallet is the most popular and well used pallet globally, the need to repair quickly and efficiently can not be underestimated.

#### 3. Profitability

Fast, efficient and safe production of repaired pallets is the only guaranteed way to ensure long term growth, success and profitability. Given the **soaring price** of timber, the ability to efficiently manufacture pallets from recycled pallets is critical to the bottom line of all businesses.

#### 4. Sustainability

With global demand for timber at an all time high, and timber production falling due to deforestation, climate change and the current war in Ukraine, the need to manufacture from recycled pallets and re-used wood is fundamental to the wood pallet industry being sustainable both now and in the future.

### About AT Z-Motion

Based in Colchester, Essex, we are experts in the field of CNC technology and supply Routers, Laser Cutters, Pallet Assembly Tables and Hot Wire Cutters. As engineers we also offer maintenance and machine relocation services.
